Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    protein kinase (EC 2.7.1.37) akt2 [validated] - rat
N;Alternate names: protein kinase B beta; RAC-PK-beta; serine/threonine-specific
C;Species: Rattus norvegicus (Norway rat)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        F;4-106/Domain: pleckstrin repeat homology <PLK>F;150-409/Domain: protein kinase homology <KIN>F;158-166/Region: protein kinase ATP-binding motif
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A, Description: catalyzes the formation of peptidyl-serine-phosphate or peptidyl-threonine A; Pathway: signal transduction pathways regulating various processes C;Superfamily: RAC serine/threonine-protein kinase; pleckstrin repeat homology; protein lC;Superfamily: RAC serine/threonine-protein kinase; serine/threonine-specific protein kinase; serine-specific protein kinase; serine-speci
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            A;Cross-references: UNIPROT:P31751; UNIPARC:UPI0000049EDB; GB:M95936; NID:g178325; PIDN:
A;Note: sequence extracted from NCBI backbone (NCBIP:115859)
C;Comment: This protein is amplified in some pancreatic, ovarian, and other carcinomas.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            R;Cheng, J.Q.; Godwin, A.K.; Bellacosa, A.; Taguchi, T.;

Sequence 351, Application US/09949002

Patent No. 690016

GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH INFLAWMATORY AUTOIMMUNE DISEASE, METH
TITLE OF INVENTION: AND USES THEREOF
FILE REFERENCE: CL000790
CUURRENT APPLICATION NUMBER: US/09/949,002
CURRENT FILING DATE: 2000-01-28
PRIOR APPLICATION NUMBER: 60/231,401
PRIOR FILING DATE: 2000-09-08
NUMBER OF SEQ ID NOS: 10823
SOFTWARE: FASESEQ for Windows Version 4.0
SEQ ID NO 351
LENGTH: 786
                                                                                                                                                                                                                                                                                                                                                                                                                                 В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ; ORGANISM: Human

or a tetragonal space group. New crystal of protein kinase B beta, useful for activating protein kinases, e.g. AGC kinases, comprises three-dimensional atomic coord coordinates

Claim 32; Page 265; 284pp; English.

The present invention describes a crystal of protein kinase B beta (PKBbeta) comprising (I), where (I) comprises: (a) a tetragonal space group P4-1-2-1-2 and unit cell dimensions of: a = 149.33 plus or minus 0.5 Angstrom, b = 149.33 plus or minus 0.5 Angstrom, c = 39.77 plus or minus 0.5 Angstrom, b = 148.40 plus or minus 0.5 Angstrom, b = 148.40 plus or minus 0.5 Angstrom, c = 38.55 plus or minus 0.5 Angstrom; a =

(I) has cytostatic, antidiabetic, vasotropic, nootropic and neuroprotective activities, and can be used in gene therapy. The crystal of PKBbeta, and methods from the present invention, are useful in activating protein kinases, particularly AGC kinases, for identifying modulators of protein kinases activity, and for structural analysis of other protein kinases. The crystal may also be used in manufacturing a medicament for treating cancers, diabetes, erectile dysfunction or neurodegeneration. The present sequence represents a peptide which can be used in a method from the present invention to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Angstrom,

Three-dimensional protein coordinate data is given in the specification. Also disclosed is a method for determining the structure of a PKB derivative, analysing a PKBbeta-ligand complex, determining a three-dimensional structure for a target kinase, and a computer system or computer-readable media containing atomic coordinate data listed in the specification. The crystal of PKBbeta, and methods are useful in activating protein kinases, particularly AGC kinases, for identifying modulators of protein kinase activity, and for structural analysis of other protein kinases. The crystal may also be used in manufacturing a medicament for treating cancers, diabetes, erectile dysfunction or neurolegeneration. The current sequence represents a peptide used in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Pharmaceutical; cell signaling; chemotherapy; AGC kinase related discance; diabetes; neurodegenerative disease; Alzheimers disease; Parkinsons disease; AIDS associated dementia; amyotrophic lateral sclerosis; multiple sclerosis; schizophrenia; scleroderma; cardiomycete hypertrophy; reperfusion; ischemia; baldnes neuroprotective; antiparkinsonian; nootropic; anti-hiv; neuroleptic;

Sequence 15
                                                     specification. The crystal of PKBbeta, and methods are useful in activating protein kinases, particularly AgC kinases, for identifying modulators of protein kinase activity, and for structural analysis of other protein kinases. The crystal may also be used in manufacturing a medicament for treating cancers, diabetes, erectile dysfunction or neurodegeneration. The current sequence represents the crystallised PKBbeta molecule C-terminal tail.
                                                                                                                                                                                                                                                        Also disclosed is a method for determining the structure of a PKB derivative, analysing a PKBbeta-ligand complex, determining a three-dimensional structure for a target kinase, and a computer system or computer-readable media containing atomic coordinate data listed in the

Identifying modulators of protein kinase (PK) activity, useful in developing drugs for treating cancer or diabetes, by measuring the ability of the compound to modulate or mimic the interaction of PK interacting polypeptides

Claim 14; Page 130; 180pp; English

RESULT 7
AAB99805
ID AAB9
AC ACAB
AC A The present invention describes a method for identifying a compound that modulates protein kinase activity. The method comprises measuring the ability of the compound to inhibit, promote or mimic the interaction of a hydrophobic pocket-containing protein kinase with an interacting polypeptide. The interacting polypeptide interacts with the hydrophobic pocket of the protein kinase and/or comprises the amino acid sequence phe/Tyr-Xaa-Xaa-Phe/Tyr [1]. The method is useful in screening assays for developing pharmaceutical compounds or drugs. Compounds, polypeptides or polypucleotides from the present invention are useful in medicine. particularly in the manufacture of a medicament for treating a patient in need of modulation of signalling by a hydrophobic pocket-containing protein kinase. Specifically, the patient has cancer or diabetes or is in

The present invention describes a crystal of protein kinase B beta (PKBbeta) comprising (I), where (I) comprises: (a) a tetragonal space group P4-1-2-1-2 and unit cell dimensions of: a = 149.33 plus or minus 0.5 Angstrom, b = 149.33 plus or minus 0.5 Angstrom, c = 39.77 plus or minus 0.5 Angstrom, a = 148.40 plus or minus 0.5 Angstrom, b = 148.40 plus or minus 0.5 Angstrom; a = 149.70 plus or minus 0.5 Angstrom, c = 38.55 plus or minus 0.5 Angstrom; a = 149.70 plus or minus 0.5 Angstrom, b = 149.70 plus or minus 0.5 Angstrom, b = 149.52 plus or minus 0.5 Angstrom; or (b) the three-dimensional atomic coordinates listed in the specification. (I) has cytostatic, antidiabetic, vasotropic, nootropic and neuroprotective activities, and can be used in gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       need of inhibition of apoptosis, e.g. a patient suffering from tissue injury or ischaemic injury, including stroke. The compound or composition is also useful for inhibiting the degree or rate of phosphorylation by the protein kinase. The interacting polypeptide or compound is useful in methods of stabilising a hydrophobic pocket- containing protein kinase, where the protein kinase is exposed to the compound or polypeptide. AAB99786 to AAB99847 represent amino acid sequences, and AAH44210 and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New crystal of protein kinase B beta, useful for activating protein kinases, e.g. AGC kinases, comprises three-dimensional atomic coordinates
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Barford
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             14-AUG-2001; 2001GB-00019860
